

How to make your own window implements

- Hanging rope or paracord:
Cut rope to length of the window with strands **about every four inches** and attach to the top of said window. Rope is good for this but if you have long wind chimes, decorations, ribbons, etc. they will work just as well.
- Bird Tape:
Take scotch tape or any non-see through tape and put it up on your windows, again pieces of tape should be about four inches apart. Clear tape with UV coating will work as well.
- Stencils:
Use waterproof paint, window markers or draw your own designs on the insides of your windows to deter birds. Again this artwork should fill up most of the window.
- Waterproof Adhesive paper:
Trace and cut out your designs on this paper, then stick it to your windows. The waterproof paper designs should take up most of the window and **be no more than four inches apart** to deter birds.
- Decals:
Create your design by making it or using something off the internet, then use one of the sites listed below to print it. **Decals should fill most of the window and should only be about four inches apart.**
 1. Uprinting (www.uprinting.com)*
 2. Sticker Mule (www.stickermule.com)(*
 3. Sticker You (www.stickeryou.com)(
 4. Sticker Giant (www.stickergiant.com)(
 5. VistaPrint (www.vistaprint.com)

*These are the sites I used

Other things you can do to prevent bird strikes:

- Turning lights off at night
- Relocating feeders within so they are between 3 and 30 feet away from windows
- Install window screens
